

VOLTAGE MEASUREMENTS

Voltages shown are typical values measured on AVO 8 meter (20K ohms per volt).

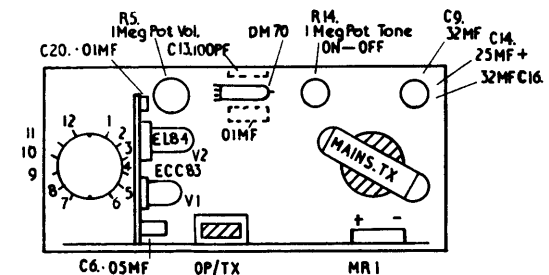

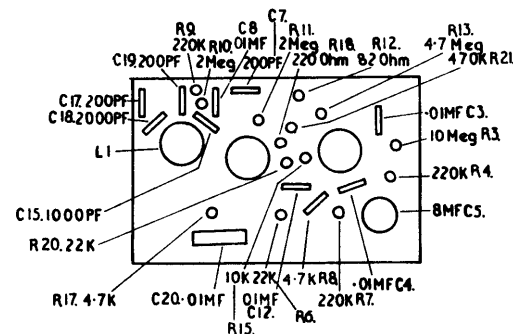

Recording Head Bias and Erase Head volts are at 50 Kc/s and should be measured on a Valve Voltmeter to obtain accurate readings.

Record Head bias approx. 50-80V.

Erase Head volts minimum 20V.

Both the above are measured across the respective heads.

A model AVO 8 meter set to the 100V A.C. range will give approximate voltage indications within the limits given above for the more accurate Valve Voltmeter readings.
